

PRODUCT UPDATE

Release Date : 26 Mar 2008

SOKKIA Spectrum Survey 4.0 is Available

SOKKIA is pleased to announce that that Spectrum Survey V4.00 is now available. The latest version contains enhanced features designed to improve overall performance of the software.

Spectrum Survey V4.00 Features

- Processed solutions now incorporate GLONASS measurements when available.
- Improved Ionospheric modeling for mid-to-long baselines.
- Improved Time to First Fix (TTFF) for short and medium baselines.
- Increased robustness and solution availability for Trajectory processing.
- RINEX conversion now supports conversion of GPS L2C measurements.
- New geoids are included: GSD95 (Canada) and HTv2.0 (Canada).

Planning V4.00 Features

- Supports planning for GLONASS satellites when Almanac data is present in raw data files (*.pdc).
- RINEX conversion now supports conversion of GPS L2C measurements.

Notice to current users:

If updating from a previous version, please remove prior versions by using the Add/Remove utility in Start | Settings | Control Panel. All project files (*.SPR) will remain intact, so the projectors should also appear after the installation of V4.00. It is recommended that you back up the "C:\Program Files\Sokkia\Common\Spectrum Projects" folder to a safe location prior to upgrading. Also, Planning projects (*.pln files) from earlier versions of Planning cannot be opened in v4.0. If required, project information must be recreated. If the software was previously activated, and the same computer is being utilized, the same Product Activation Key can be used for V4.00.
