*1 IEC60825-1:Ed.2.0:2007 / FDA CDRH 21 CFR Part 1040.10 and 11
 *2 Average conditions: Slight haze, visibility about 20km (12 miles), sunny periods, weak scintillation.
 *3 Fine mode. With Kodak Gray Card White Side (90% reflective). When brightness on measured surface is 30,000 lx or less. Reflectorless range/accuracy may vary according to measuring objects, observation situations and environmental conditions.
 *4 When the measuring beam's incidence angle is within 30° in relation to the reflective sheet target.
 *5 Measuring range in temperatures of -30 to -20°C (-22 to -4°F) with Low Temperature models and 50 to 60°C (122 to 140°F) with High Temperature models: RS90N-K: 1.3 to 300m (4.3 to 980ft.), RS50N-K: 1.3 to 180m (4.3 to 590ft.), RS10N-K: 1.3 to 60m (4.3 to 190ft.)
 *6 Good conditions: No haze, visibility about 40km (25 miles), overcast, no scintillation.
 *7 Measuring range: 0.3 to 200m
 *8 Typical, under good conditions. Reflectorless measurement time may vary according to measuring objects, observation situations and environmental conditions.
 *9 Usage approval of Bluetooth wireless technology varies according to country. Please consult your local office or representative in advance.
 *10 No obstacles, few vehicles or sources of radio emissions/interference in the near vicinity of the instrument, no rain.
 *11 The laser-pointer and the guide light do not work simultaneously.

FX-200 series

Functional X-ellence Station

For professionals like you

- High performance EDM for rapid, repeatable measurements
- Modern, intuitive onboard MAGNET® Field software
- Convenient EDM trigger key
- Reflectorless laser measurement

Professional results from basic to advanced applications

Survey

Boundary and Cadastral Survey
Quickly and easily calculate areas with the Area function. Determine the center point for objects such as a columns or electrical poles which cannot be directly measured by using the Offset calculation.

Topographic Survey
The trigger key, or measuring distance key, helps you perform topography quickly while continuously viewing through the telescope. Also, the long distance measuring range reduces the number of the instrument changes for more efficient working time.

Traverse Adjustment
Adjust and correct closure errors for latitudes, departures, angles and/or elevations directly from the MAGNET Field onboard software.

Stake Points
A complete solution for every type of layout and stakeout is included in the software. Points, lines, offsets, roads, surfaces, slopes, and real-time roads are all available.

Topographic Survey
Collect points, lines, areas, cross sections, and surfaces including automatic top point capture. Select Map or Measurement View and even record offset shots all while within Topo Survey.

Road/Cross-Sectional Survey
All the road stakeout information can be seen on one screen as you stake anywhere along the road design in real-time. Be more productive with real-time roads information.

Improve topography and stake out with features to achieve faster and more efficient workflows

Newly Designed High-Performance Class EDM

Especially effective in surveying control points that require high-accuracy, and in cross sectional surveying in large areas with reflectorless measurement mode.
